1 – Material Reception

In this system component, the user can create and manage material receptions, associated or not with purchase orders.

1.1. Material Reception – Workflow diagram

When a purchase order is approved in the system, the document is ready to be received. At this stage, the user can access to scheduled deliveries and search for all pending purchase orders, printing the deliveries barcodes that are scheduled to be received.

For that, if the delivery is associated with a service product, the user only registers a purchase reception and the document is ready to be invoiced. Otherwise, if the delivery is associated with a stock material, the user should register a material reception document, in order to enter correctly the data in the system. After material reception, if quality control is enabled, the system allows to generate a sample for material control. At this stage, if material reception is automatic, the system generates a stock entry. If material reception requires approval, it is necessary to approve the document before material entry in warehouse. At the end, is generated a supplier invoice that will revalue the stock material with invoice value.

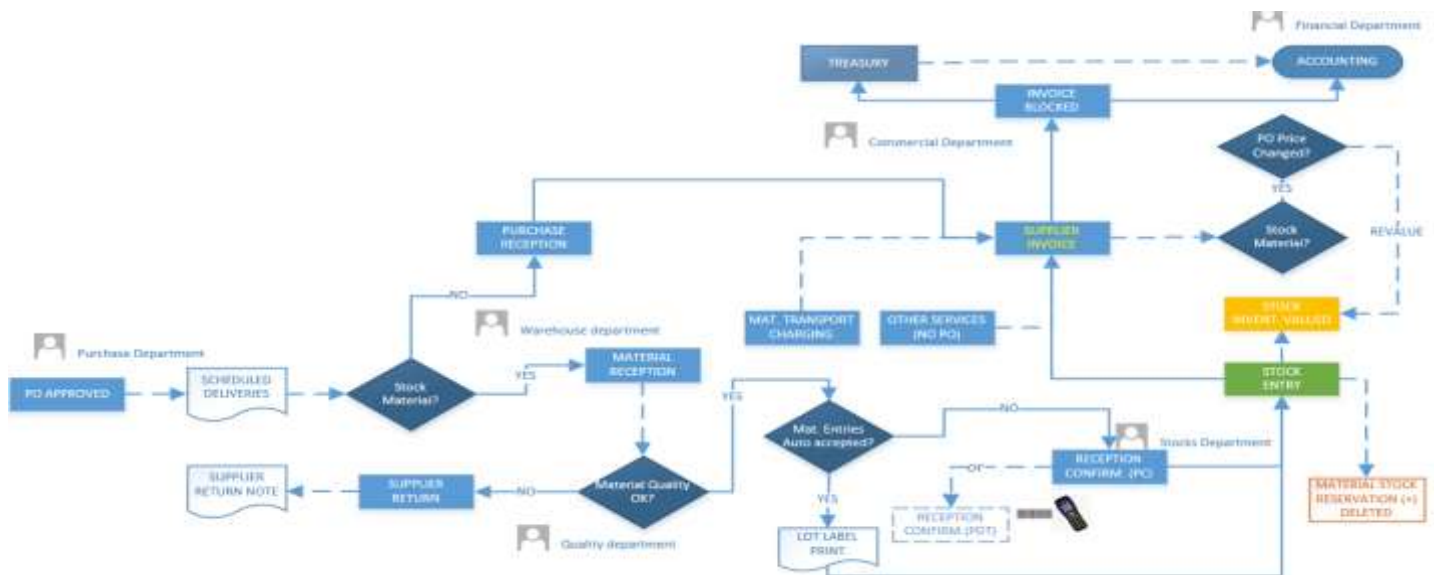

Figure 1 –Material Reception workflow

2. Material Reception

2.1. Scheduled Deliveries

At the menu option Sistrade > Stocks > Materials Reception > Scheduled Deliveries, the system lists all the scheduled deliveries opened. Here it is possible to apply several filters for information.

Stock	Date	ID / Plan	Qty	Missing Qty	Quantity to receive	Unit	Delivery Date
(F100067) ABL-TECHNIC PORTUGAL UNIPessoal, LDA	2019-11-07	OC17 / 00000406-1	1 000.00000	1 000.00000	0.00000	KG	2019-11-07
(F100081) EXTRUSAL - COMP. P. EXTRUSÃO, S.A.	2019-09-04	OC17 / 00000404-1	100.00000	85.00000	0.00000	KG	2019-09-04
(F100067) ABL-TECHNIC PORTUGAL UNIPessoal, LDA	2019-05-21	OP17/00000473 / C&P Prof. Bateria V12 Klapp WEIBEL M&B	234	34	0	UN	2019-05-21

Figure 2 –Scheduled Deliveries

Here, the user can analyse the missing quantities (in both the purchase measurement unit and stocks management unit), close/re-open deliveries and print barcodes. If a delivery plan is not fully received, the user can close the delivery so that it can be settled. Changes to delivery plans can also be made on this screen, using the "Edit plan" option.

To proceed for material reception, the user can obtain the deliveries barcodes by printing it in this screen.

Figure 3 –Scheduled Deliveries barcodes

2.2. Material Reception – document structure

To create/view a material reception the user should access the following menu option: Sistrade > Stocks > Materials Reception > Materials Reception.

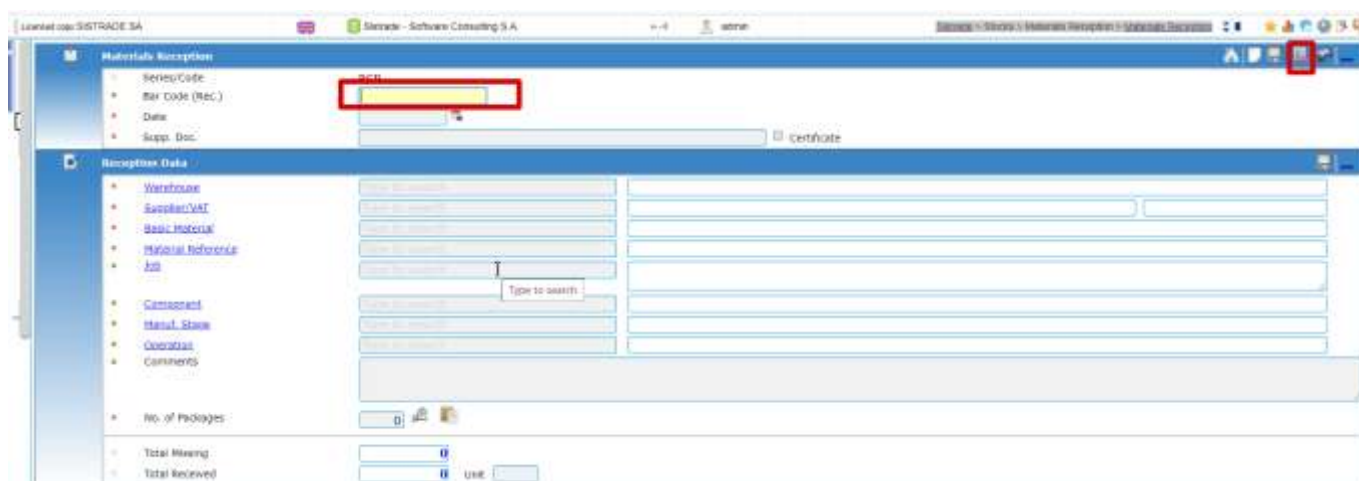

Figure 4 –Material reception screen

The user can read a delivery barcode directly through the field "Bar Code (rec.)" or manually by selecting "Pending purchase search" button.

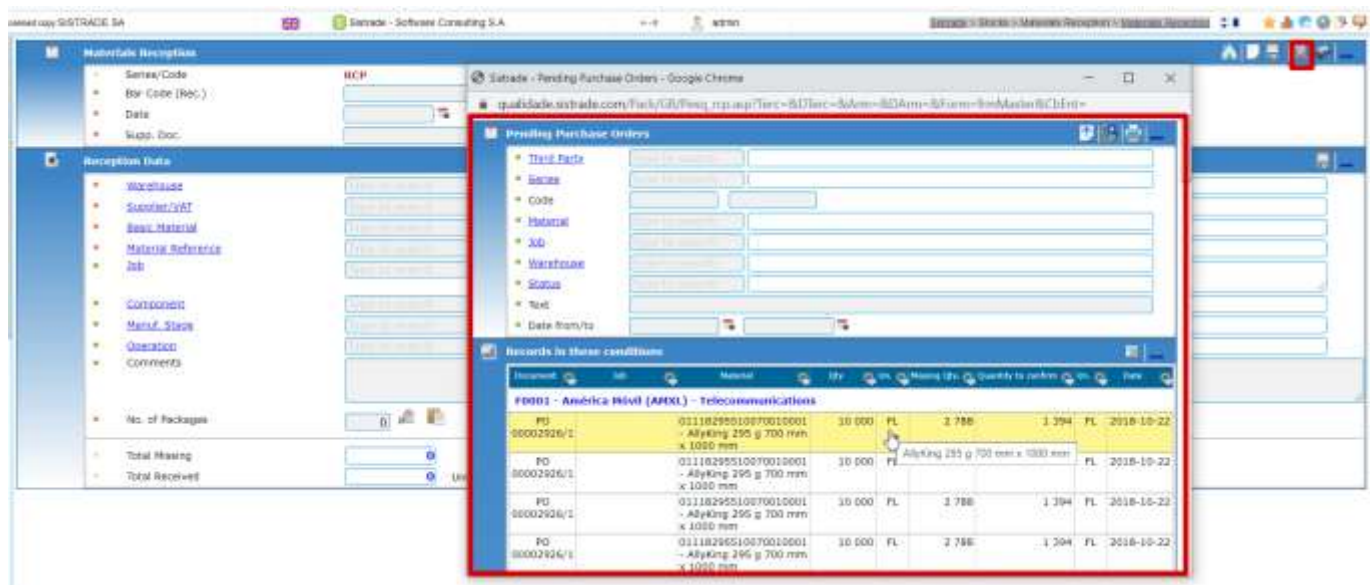

Figure 5 –Pending purchase orders

If the user does not have the delivery barcode, it is possible to manually search for pending purchases. By clicking in a pending delivery, the system autocompletes purchase information in material reception document.

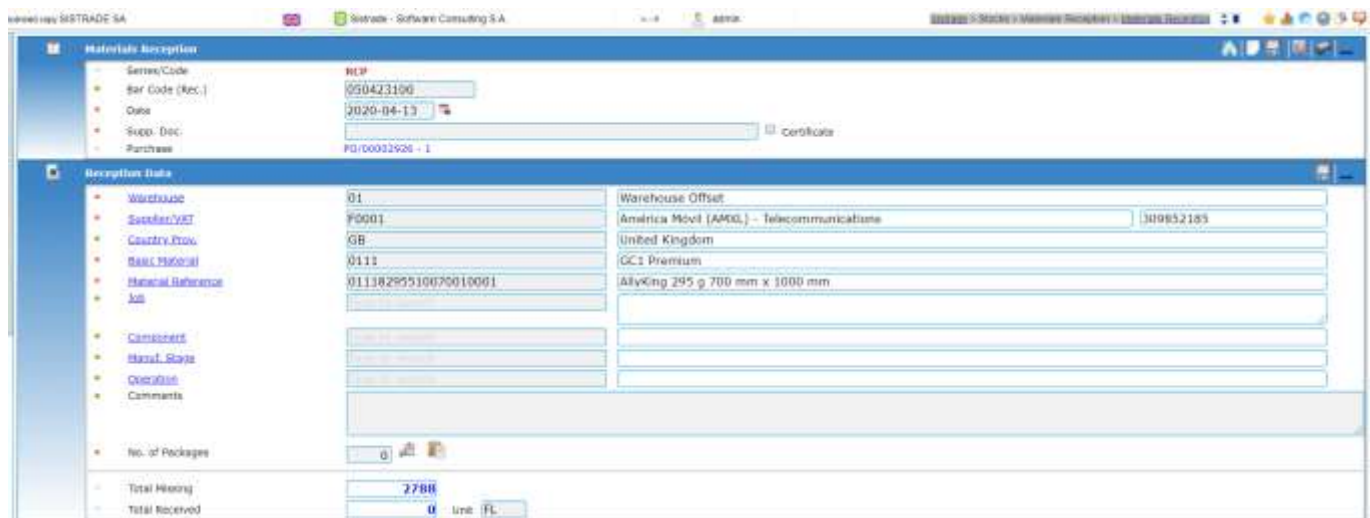

Figure 6 – Autocomplete purchase information

After defining the purchase order to be received, it is necessary to define the number of packages to be received (this functionality is only available if the material has lot control defined). After setting this value, the system will open how many lines as the number of selected lots.

* No. of Packages:

* Expiration Date:

* Total Missing:

* Total Received: Unit:

Package Details: Package Ref: Quantity: Location:

#	Location	Package Ref	Qty	#	Location	Package Ref	Qty
1 02		L-20200413	500	2 02		L-20200413	500
3 02		L-20200413	500	4 02		L-20200413	500

Figure 7 – Number of packages definition

For each package line, the system allows to define the package quantity, package reference and destination location. After set, all the information, the user should save the document.

After save the document, if auto accepted material reception process is disabled, there is an additional step of quantities confirmation before the material entry (will be explained next). Otherwise, the system generates a material entry when this document is saved. In both cases there are generated the labels to link with material.

Supplier: Posco - Materials

Sup. Ref. SUP10042020

Figure 8 – Packages labels

2.3. Material Reception – confirmation

As previously mentioned, if auto accepted material reception process is disabled, its necessary to confirm the document before material entry. To do that the user should access the menu option: Sistrade > Stocks > Materials Reception > Receptions Confirmation. In this option, the system lists all material reception documents pending of confirmation.

Figure 8 –Reception Confirmation

Here, the first step is to select a delivery or a set of deliveries to be confirmed and go to next stage.

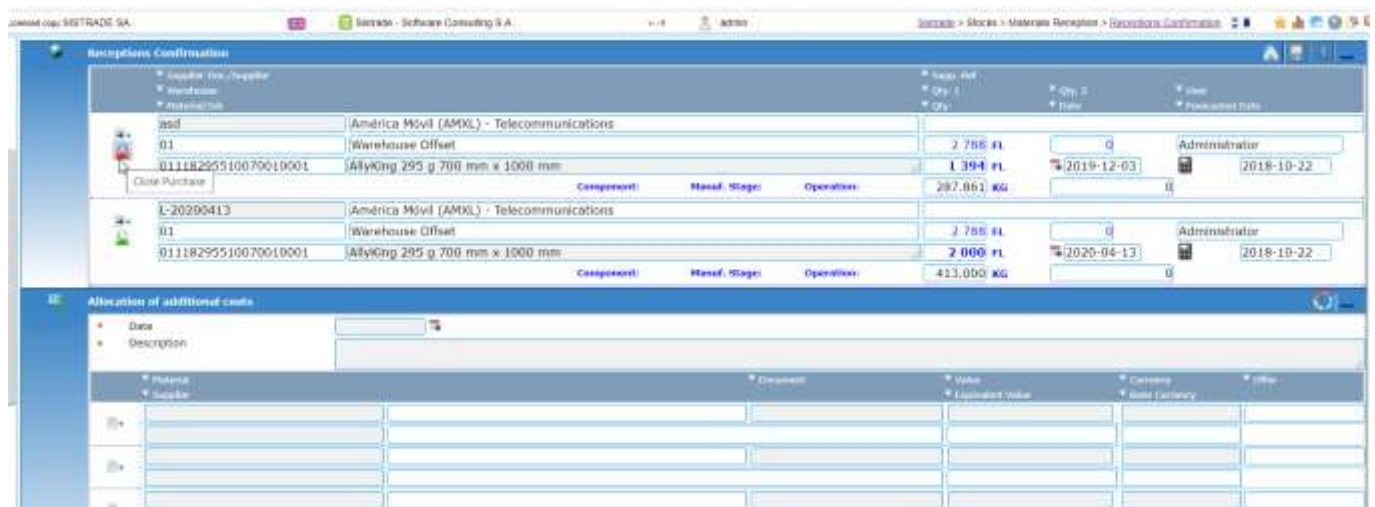

Figure 9 –Reception Confirmation save

The previous screen list all the selected deliveries and information of received quantities. Therefore, the user should verify the received quantities and materials. To confirm a material reception, it is necessary to save this confirmation document.

In this option, the user can close a purchase by selecting "Close Purchase" button.

After confirming, the system lists the material reception documents number and detail information.

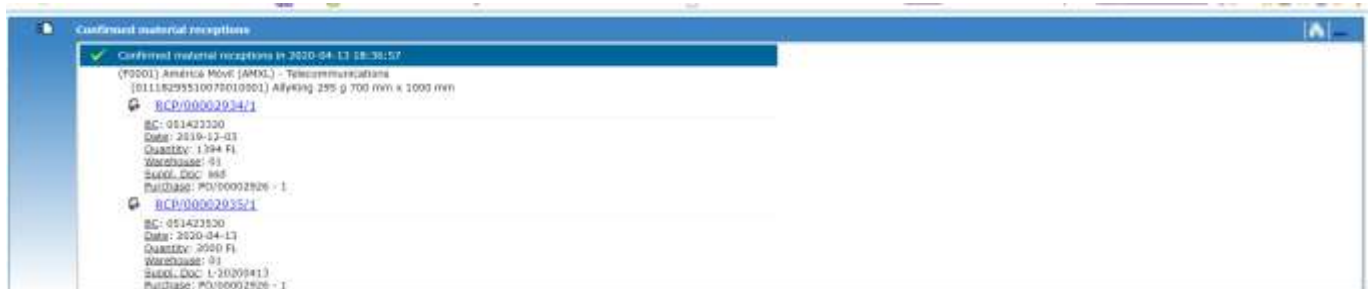

Figure 10 – Confirmation process

The user can access document detail by clicking on material reception link:

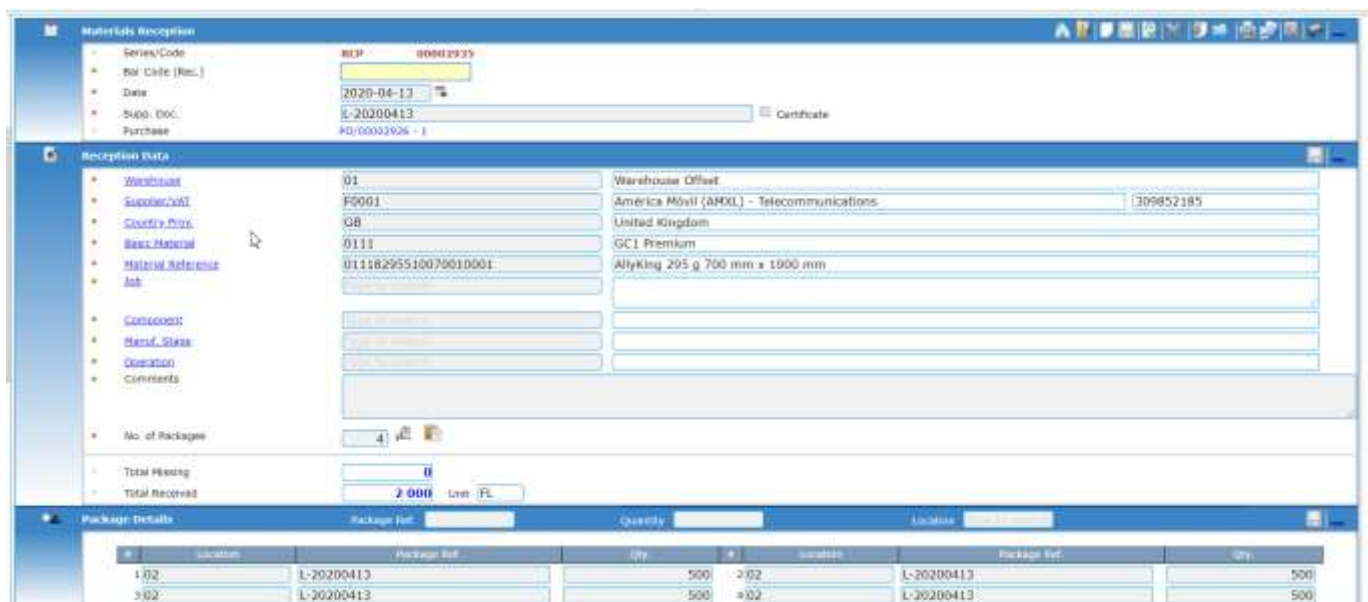

Figure 11 – Effective material reception with assigned number

As an alternative to reception confirmation in backoffice, the system allows to make this operation in mobile picking tool. That can be accessible from the following option:

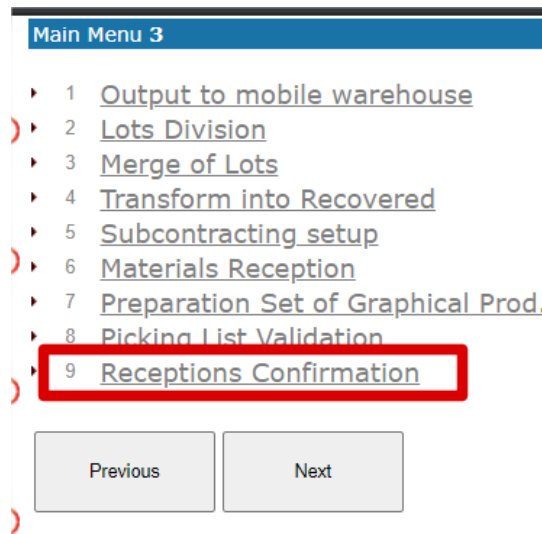

Figure 12 – Confirmation of the reception Mobile option

Here the user should read the lot barcode for confirmation. Alternatively, select one of the pending receptions of the list:

Figure 13 – Select reception to confirm

After select the reception, the user should confirm the supplier reference for the lot and quantities. The tool will allow too the definition of the expiration date of the packages to be confirmed with the bar codes match, internal and external:

Figure 14– Input reception data

Upon configuration, the SW may request the expiration date of the packaging, and upon the expiration date defined in the material sheet, the SW will automatically calculate the expiration date of the received packaging. This scenario is useful when the supplier's lot label only shows the date of production, not the expiration date. In this type of scenario, the SW will also require the same screen definition of the package production date:

Figure 15 – Expiration days after production date

After set, all the information, the user should confirm the reception. Therefore, after that, the system will generate a package in the system and also a stock movement in the warehouse.

Do you confirm material reception?

09558488 5000

Figure 16 – Stock movement confirmation

2.4. Material Reception – Stock search

After confirming a material reception, the system generates a material entry in warehouse. There are several stock reports that allows the user to verify the available stock for each material.

For instance, can be used the following report: Sistrade > Stocks > Reports > Lots Search to search the actual stock and movement resume associated with each package.

qt	Mask	Location	Date	Expiration	Document	Customer	Package Ref.	Lot	Order	IS	Grave	PL	Accountant	Re	QW	PL	Print
[01118295510070010001] Alloying 395 g 200 mm x 1000 mm

01	01	02	2020-04-13		L-20200413	00001	L-20200413					500		1 000	PL		
01	01	02	2020-04-13		L-20200413	00001	L-20200413					500		1 500	PL		
01	01	02	2020-04-13		L-20200413	00001	L-20200413					500		2 000	PL		

Figure 17 – Lots search

In this case, can be used as filter the document number associated with material reception. Therefore, after filtering information, the system filters all the received packages for this document. It is possible to analyse the actual quantity of each package, the quality status, the package history and reprint labels.

Figure 18 – Package resume

In package resume, it is possible to analyse all stock movements associated with each package, supplier information, entry date, warehouse, etc.

2.5. Material Reception – Supplier return

If for some reason, the package is damage or material quantity is wrong, it is possible to register in the system a supplier return. This movement will be consuming a package from the stock and send it to the supplier. To do this movement, the user should access the menu option: Sistrade > Stocks > Warehouse Entries > Notices of Return to Suppliers

Figure 19 – Supplier return document

The first step is to select the warehouse where the material to be returned is located. Then, is required to select the supplier and the package(s) to return. After select the packages is possible to set the quantities of each one to return. On document saving, the system will generate a supplier return note and allows the user to generate a transport note, directly from this screen.

Figure 20 – Supplier note example

After that, if the user checks the stock, the actual stock for the initial document is changed.
