1. Introduction - Job Order Workflow

Job Orders have a workflow that will be described here. It will follow the diagram presented in the figure below:

The workflow can be configured two ways. Simple or Extended Workflow.

If Simple Workflow is configured, the workflow status are:

- D – Registered : First stage of job order. The job order can be edited and technical data changed;
- O – Approved for Production : In this point the job order can not be changed. The material needs as well as the service requisitions were issued;
- P – Production : The job order enters this status, automatically when enters in machine in production;
- F – Closed : When all the quantities are shipped and invoiced. This step can be automatic or manual;
- A – Cancelled : When the job order is cancelled for some reason;

If Extended Workflow is configured, the workflow status are:

- B – Pending
- C - Checking
- D – Registered
- O – Approved for Production
- P – Production
- F – Closed
- A – Cancelled
- R – Commercial Revision

The Workflow Extended we have 3 more status that are B, C and R. This workflow allows more actors to interact with the job order. For instance, when it is in B the job order is being prepared and filled with all the technical data. When is C, it can be used for the purchase department to check the material needs and

services, in order to generate the requisitions in this stage, and when is R, it can be used by the commercial department to block this job order to proceed by some reason. For instance if customer asks for last minute changes in the work.

2. Job Order - Creation

There are two ways to create Job Orders:

- First, the job order is created directly from job order menu option;
- Second, the job order is created from an Order and Estimate or previous job order linked to that product.

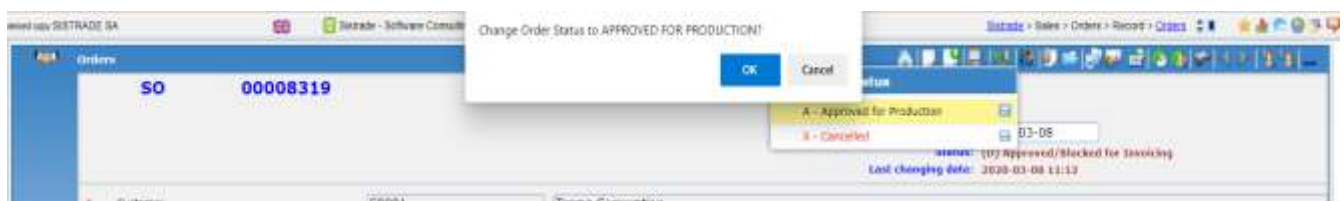

2.1. Job Order - Creation from an Order

When Customer Services register the customer order, the customer order rows are linked to Estimates. So when we approve the customer order, the system allows to generate the Job Orders automatically from that Order based on the Estimates. If this product was produced before, we can also use by configuration, the first job order / last job order, linked to that product on technical data sheet.

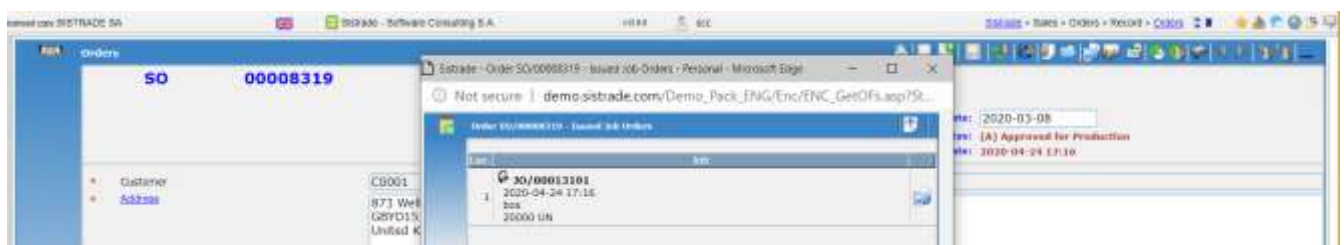

Considering the user has already gone through the usual commercial steps:

- Create and Approve Estimate;
- Create and Register an Order.

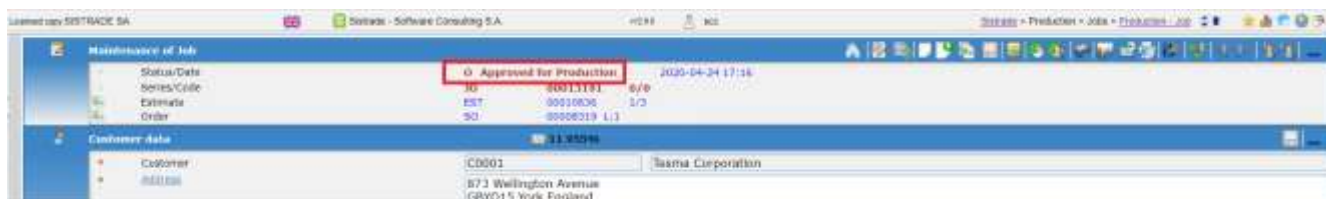

Since the user has a Registered Order that can be sent to its next step, which is 'Approved for Production'. When proceeding with that step the system will prompt the user asking if the Job Order should be generated automatically:

It will show the info of the newly created Job Order:

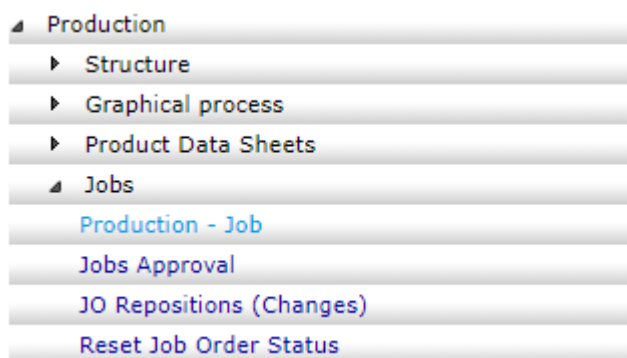

Accessing the Job Order option, 'Sistrade > Production > Jobs > Production - Job', the user can verify that all data from the order has been automatically inserted, freeing the user from doing it manually:

From this point on the steps will be the same as those for Job Orders created from scratch. Therefore, before continuing, the next chapter will explain how to create a Job Order from scratch and then we will resume the workflow for both cases.

2.2. Job Order - Creation from Scratch

To create Job Order from scratch, the user must go to the following option 'Sistrade > Production > Jobs > Production - Job':

Here he can use the button 'copy job order' to create a job order based on another one:

Or he can start a job order from the beginning after selecting the job order series:

In the header the user must:

Maintenance of Job

Status/Date: Series/Code: 30

Customer data

Customer: C0001 Tesma Corporation
 Address: 873 Wellington Avenue, GBY015 York England, United Kingdom
 Contact: V011 Carolina Gchel
 Currency: EUR Euro
 Payment: 600 60 Days

Job Request Information

Customer Request: [Field]
 Product Type: [Field]
 Stock Product: [Field]
 Certification PSC/PPC: [Field]
 Quantity/Value/Thou per Thousand: 0.00 0.000
 Item / Pages: [Field]
 Open Format WxL: [Field] mm [Field] mm
 Format Width: [Field] mm [Field] mm
 Item Size WxH: [Field] inch x [Field] inch
 Reference: 1

- Insert the customer code, and the rest of the customer fields will be filled automatically;
- Insert the Job Request Information data;
- Insert any comments relevant to the creation of the Job Order;
- Save the Job Order:

When the document is saved, the system will assign it a Document number. The Status of the document will be 'Registered':

Maintenance of Job

Status/Date: Series/Code: 30 **Registered** 2020-04-23 08:08
 00013182 0/0

Customer data

Customer: C0001 Tesma Corporation
 Address: 873 Wellington Avenue, GBY015 York England, United Kingdom

This means the Job Order is not yet complete, so is still possible to change its data.

To insert the needed technical data for the Job Order, the user must go to 'Elaborate Job':

Elaborate Job

Job Components

Box - Glued

Component Descri: Box - Glued

Box Selection: [Field]

Imposition Dimensions: [Field] mm [Field] mm

Impositions: [Field] mm [Field] mm

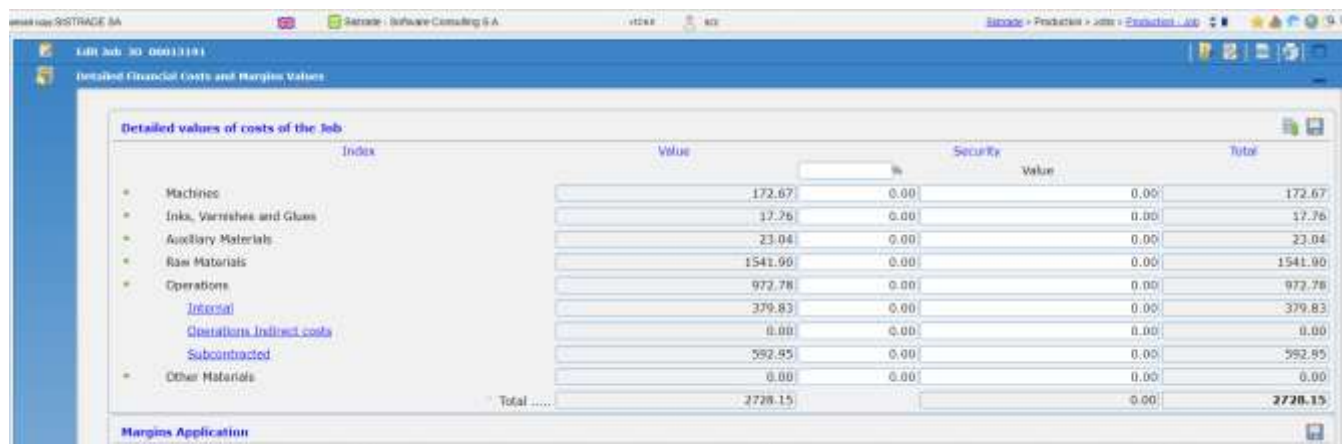

File-Cutter Type: 1201 Flat Die

Die-cutter Selection: [Field]

2.3. Job Order - Creation Intermediary Step

From this point on both ways of creating a Job Order are at the same point, therefore the following steps are applicable to both.

Similarly, to the Estimates workflow, when done, the user can go to 'Final Values' to check the costs and margins. This step is not mandatory and the option can be hidden for some users, since we may not want them to see this information.

Index	Value	Security	Value	Total
Machines	172.67	0.00	0.00	172.67
Inks, Varnishes and Glues	12.76	0.00	0.00	12.76
Auxiliary Materials	23.04	0.00	0.00	23.04
Raw Materials	1541.90	0.00	0.00	1541.90
Operations	972.78	0.00	0.00	972.78
Indirect	379.83	0.00	0.00	379.83
Operations Indirect costs	0.00	0.00	0.00	0.00
Subcontracted	592.95	0.00	0.00	592.95
Other Materials	0.00	0.00	0.00	0.00
Total	2728.15	0.00	0.00	2728.15

3. Job Order – Approve for Production

Once the Job is in order to be used by the production it must be 'Approved for Production', by clicking the respective icon:

The user will be prompted to confirm:

demo.sistrade.com says

Confirm approval of the Manufacturing for production?

OK

Cancel

As well, can be asked by configuration, if Purchase Requisitions should be generated:

demo.sistrade.com says

Do you want to make the material purchase requisitions from job order register?

OK

Cancel

When confirming a new window pops up allowing the user to select the material and services to be purchased. The user needs to select the 'Supplier', insert the 'Delivery Date' and save:

Sistrade - Job order approval - Material purchase requisitions - Google Chrome

demo.sistrade.com/Demo_Pack_ENG/orcof/OF_ResPap.asp?ID={718A4F2D-9F1F-41C6-915C-B66162924800}&AprovaOF=1

Job order approval - Material purchase requisitions

- Job: JO/00013105
- Customer: (C0005) Centex Corp. (CTX)
- Description: Sistrade Box for Thailand Market
- Detail:
- Quantity: 75000

Job order - Material purchase requisitions

- Job: JO/00013105
- Customer: (C0005) Centex Corp. (CTX)
- Description: Sistrade Box for Thailand Market
- Detail:
- Quantity: 75000

Materials

Sel.	Material	Required Qty	Available stock	Real Stock	Purchase Qty	Unit. Price	Price Kg	Delivery Date	Warehouse
Box - Glued									
	(01101300440070010001) GC1 Pharma Rochblanc 300 g 440 µm 700 mm x 1000 mm	9922 FL	21312 FL	14000 FL	9922 FL	0,21197	1,00940		Type to search
	F0074								Weichai Power - Capital Goods

Note: The generation of Purchase requests can be done before approving for production, clicking the 'Generate purchase Requests' icon:

This will generate all Purchase Requisitions for materials, as well as services, needed for the production of the Job Order.

From this point on the Job Order is 'Approved for Production':

As well as:

- Stocks are updated to reflect the JO needed quantities;
- JO is available for the Planning Department, so the Job can be added to the Scheduling.
- JO is available to use in production data collect.

4. Job Order - Printing

The Job Orders can be printed using the printing options in the toolbar:

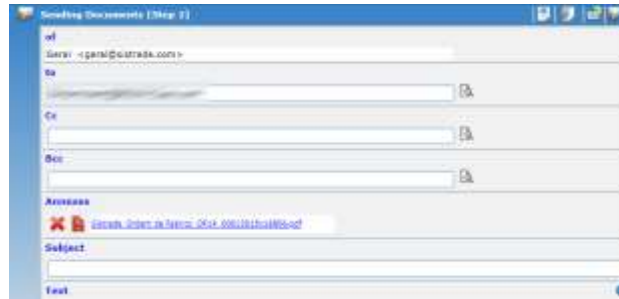

The respective report is printed on the screen:

Sistrade - Software Consulting S.A.		Job	
Sleeve / Label - Self-adhesive		Ref. OF14/00013015	
No. Technical Datasheet:		Ref. Cust.:	
Customer Nr.: (C0002) BCG Group (Oil/Gas)		Cadet	
JO Date: 2020-04-24	Date of Approval: 2020-04-24	OC. N°:	
Repetition: New		Delivery Date: 2017-09-26	
Salesperson: Eva Hrdinova	Payment Conditions: Contra-Entrega		
Comments:			
Name of Work: Demo for LabelExpo		 *0600000207	
Models	Description	Qty.	Bars Code
991001C00020000501	Demo for LabelExpo	30 000	 *0600000207

And can be sent to the SFC, WH or whomever needs it for planning purposes.

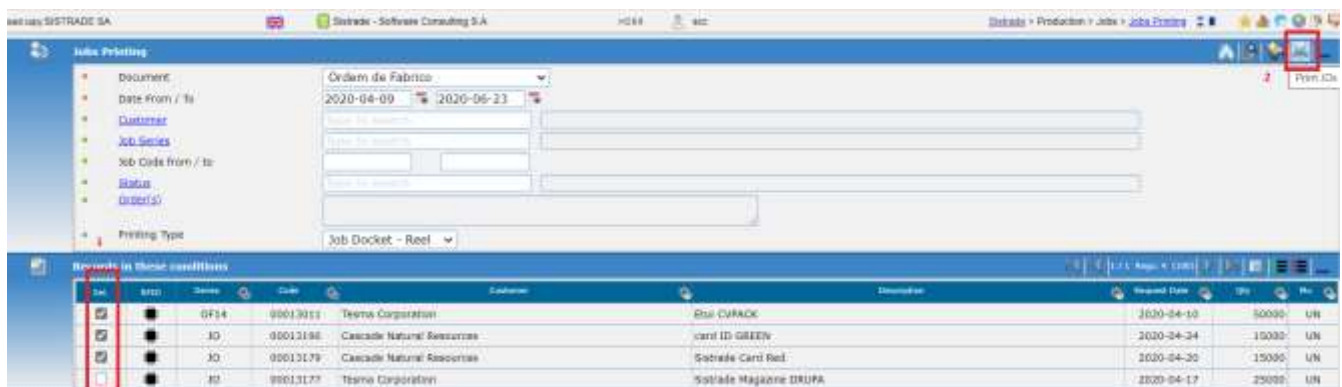

These documents can also be sent by email using the email icon:

JO can also be printed in the option 'Sistrade > Production > Jobs > Jobs Printing':

In this screen the user must select the documents to print then press print:

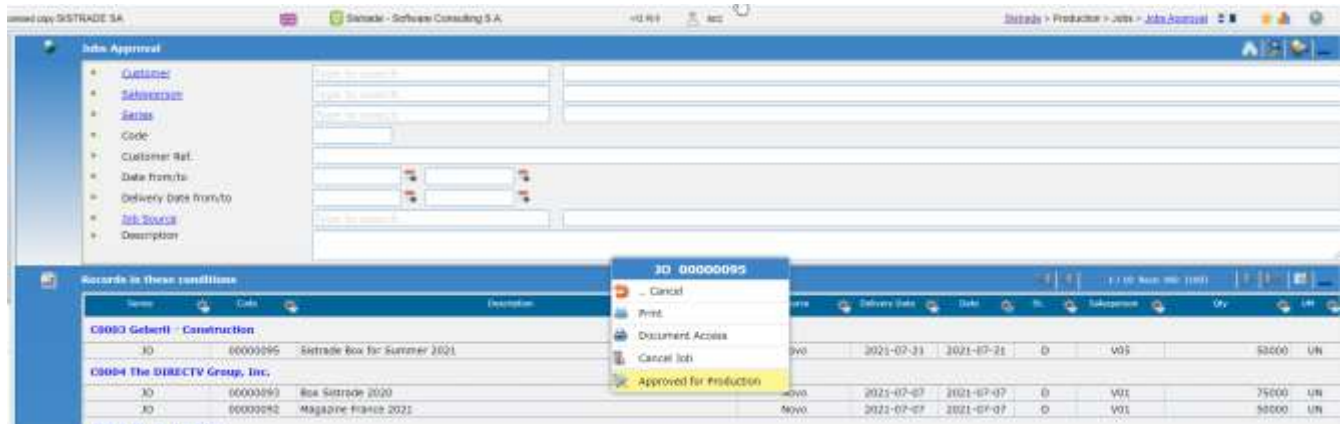

The pdf is then printed.

5. Job Order - Manual Approval

It is possible to approve JO by accessing the option 'Sistrade > Production > Jobs > Jobs Approval':

Clicking on the respective Job Order line, a modal appears. The user can cancel the JO or approve it:

From this point on the WF is as explained before.

6. Job Order - Status Restoring Processes

Two options are available to restore JO status:

- Job Repositions (Changes);
- Reset Job Order Status.

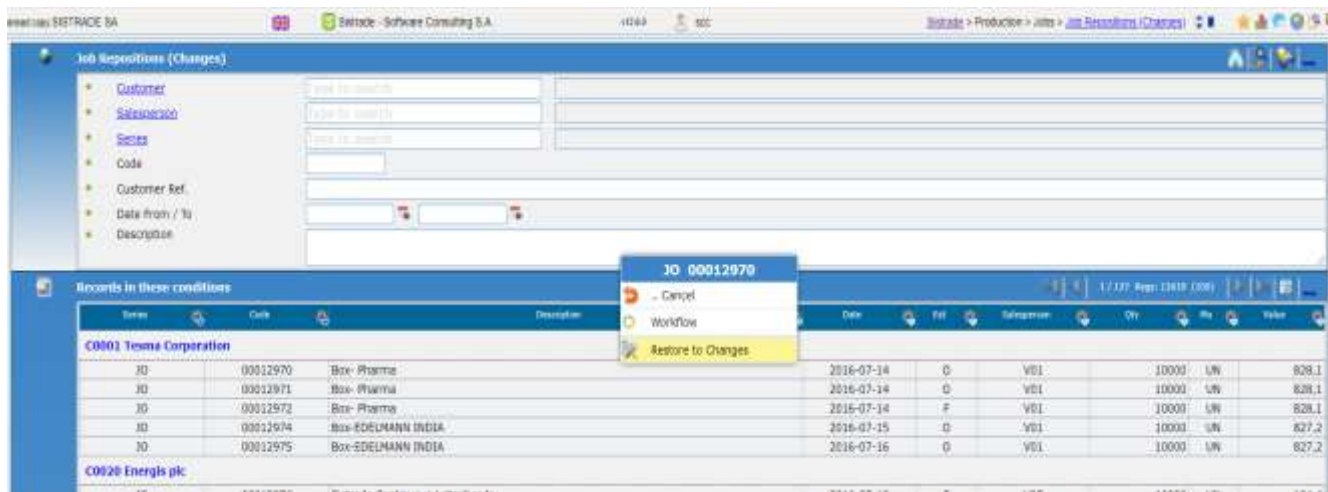

6.1. Job Repositions (Changes)

This option should be used when major changes to the JO are made and it will influence production, i.e., changes like quantities, materials, etc. **A status change via this option will make the JO unavailable for production.**

When accessing this option, 'Sistrade > Production > Jobs > Job Repositions (Changes)':

The following screen is presented, where only JO in 'Approved for Production', 'In Production' or 'Finished' are shown, and clicking on the JO the user can restore the JO status so changes can be made:

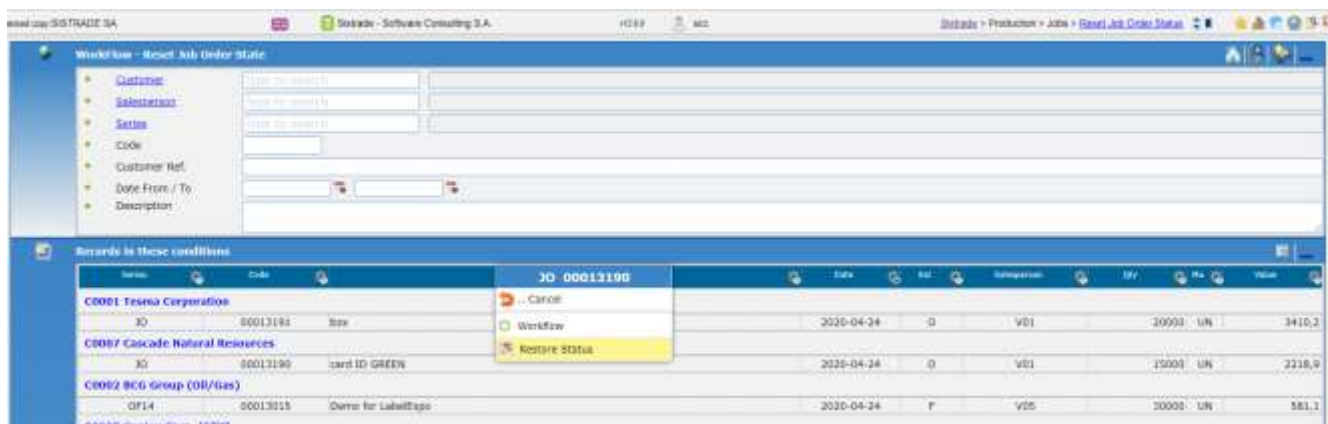

6.2. Reset Job Order Status

This option should be used when minor changes to the JO are made and it will not influence production, i.e., changes like descriptions or commercial data.

When accessing this option, 'Sistrade > Production > Jobs > Reset Job Order Status':

The following screen is presented, where all JO are shown, and clicking on the JO the user can restore the JO status so changes can be made:

7. Job Order – End Manufacturing Orders

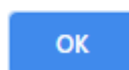

In the option '', the user has the ability to manually close (or finish) the JO. Accessing this screen, the user must select the JO, save and confirm:

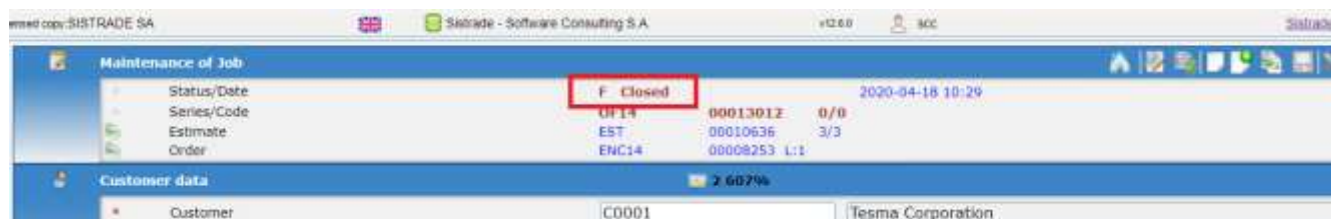

A confirmation prompt is shown:

demo.sistrade.com says

Document(s) completed successfully!

And checking the job order document, the Jo is now 'Closed':

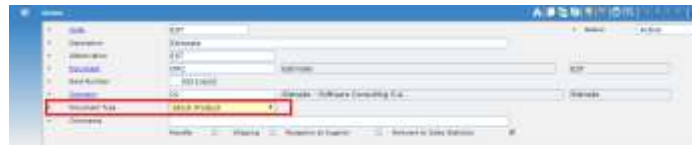

IMPORTANT NOTE: The JO can also be automatically finalized by the Invoicing Process. When the JO is associated with a delivery note and an invoice, and the full JO quantities have been dispatched and billed, it can be closed by the system.

8. Job Order – Create Jobs Stock Order

In this option, 'Sistrade > Production > Jobs > Create stock Job orders', the system allows the users to create job orders for products that have no associated customer order. These stock product JO are made as an anticipation for predictable future orders, and immediately be capable of fulfilling them.

This option will check if there are any 'Estimates for Stock Products' registered in the system, and will use them to create Jobs for Stock Products.

Note: The series for 'Estimates for Stock Products' must have 'Stock Product' has document type:

When accessing this option screen, pressing 'Search' will list all 'Estimates for Stock Products' in the system:

Product Code	Description
{9502} Boxes	Boxes Corporation Box Test
{9505} Publications	Boxes Corporation teste publico valoriza 24/05 15h
{9507} Containers	Energy plc Tomdale Lutterhead
	Harbinger Corp Harbinger Shredded Lutterhead / Soft

Clicking on a line, the user is redirected to a new screen:

Series/Code	Date	Forecasted Date	Status	Qty	Mo	Reduced
JO/00013140	03-06-2019	21-05-2019	Approved for Production	10000	UN	0
JO/00013128	23-01-2019	23-01-2019	Registered	10000	UN	0
JO/00012999	07-11-2018	07-11-2018	Registered	10000	UN	0

The user must insert the date and quantity to be produced and stored. And save:

demo.sistrade.com says
Confirm Job Order Creation?

OK

Cancel

When confirmed, a Job Order is created for that Stock Product:

demo.sistrade.com says
Job Generated JO/00013186

OK

Job Order with the specified quantity:

The screenshot displays the SAP S/4HANA interface for Job 990201. The 'Job Request Information' section is highlighted in blue. The 'Customer Data' section shows details for Teema Corporation. The 'Job Request Information' section shows details for Job 990201, including Product Type 'Box - Cardboard', Quantity '100000', and Price '2643.00'.

Field	Value
Job Number	990201
Product Type	Box - Cardboard
Quantity	100000
Price	2643.00
Unit Price	26.430
Net Price	0.08214

9. Job Order – Stock Orders MRP

This option has a similar behavior as the 'Create Jobs Stock Order' option, but in this case the listed products, to create JO from, considers the existence of a Customer Order for that product and that there is not enough quantity in stock to fulfill that order.

To create a MRP Stock Order, access the option 'Sistrade > Production > Jobs > Stock Orders MRP':

In this screen all orders that have a stock product but the quantity in stock isn't enough to fulfill it will appear here:

Stock Product Order MRP

No. Records: 50 recds.

Product Type: Box

Customer: 990209C000100000

Date to: 12/31/2010

Product Code: 990209C000100000

Description: Box - Micro Corrugated - Table Food Row Large

Records in these conditions

Date	Description	Stock	Inv. Qty	Inv. Val	Qty Prod. (date to)	Production	Required
12/31/2010	Box - Micro Corrugated - Table Food Row Large	15000	UN	0	1000	10000	10000

The system analyses the stock available, the ordered quantity, the quantity in production and calculates the required quantity to be produced for each line to be able to fulfill the customer orders.

Clicking on a line and the 'Stage 2' button, a new screen appears with the field quantity already filled with the Required quantity:

The user only needs to insert the 'Date', save, and the job order will be created.

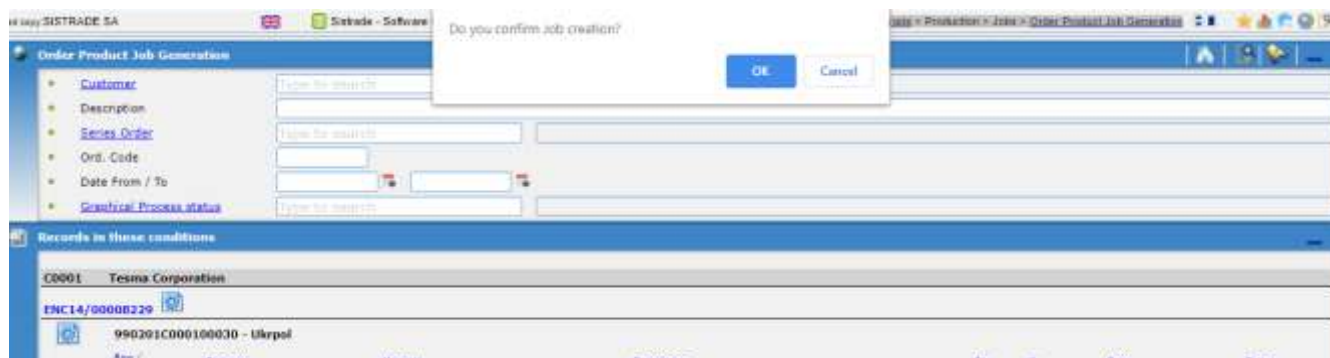

10. Job Order – Order Product Job Generation

In this option, 'Sistrade > Production > Jobs > Order Product Job Generation', the user can generate Job Orders from existing orders in the system:

The following screen appears, listing the orders existing in the system:

Clicking (1), the system prompts the user to confirm the creation of a Job order:

Confirming, the system shows the document number of the newly created JO:

demo.sistrade.com says

Generate job orders:

OF14/00013017

OK
